

**D-100 Backhoe
Owner's Manual and
Parts Catalog**

Manual Part No. H5843

J I Case
A Tenneco Company

INDEX

With Exception To Attaching Parts, This Catalog Includes All Parts For The D-100 Backhoe. Refer To The Parts Catalog Of The Machine On Which The D-100 Is Installed For A List Of The Attaching Parts.

The Boom, Dipper Stick, Buckets And Cylinders Are Also Common To The SD-100 Bucket. Refer To The Parts Catalog Of The Machine On Which The SD-100 Is Installed For A List Of The Attaching Parts And For Parts Not Common To The D-100 Backhoe.

ASSEMBLY

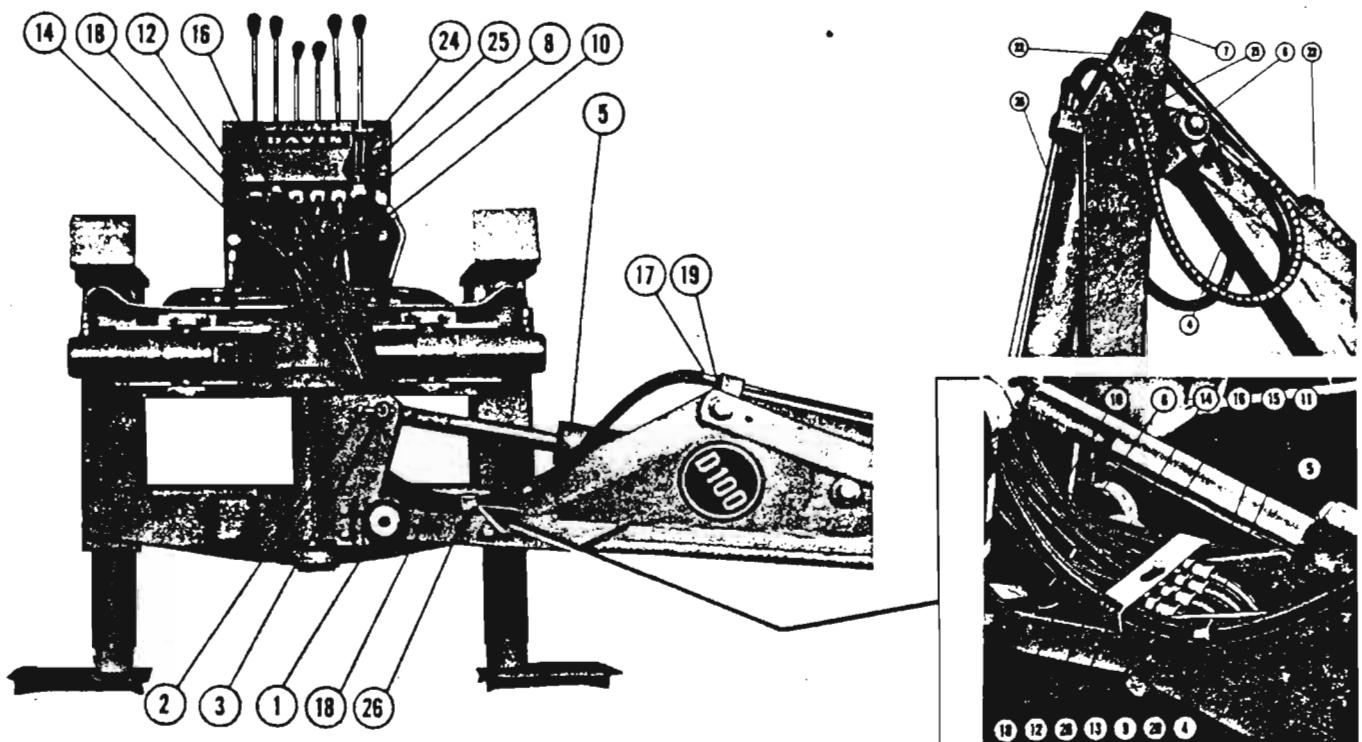

Figure 1

NOTE: In the following instructions all references to "left" or "right" are from the operator's position on the seat.

INSTALLATION OF BOOM

1. Remove bumper (1) and remove boom attaching pin.
2. Remove retaining pin (2) and boom cylinder pin(3).
3. Attach boom assembly (4) and boom cylinder (5) to king post using pins removed in steps 1 and 2.

INSTALLATION OF DIPPER STICK

1. Remove pin (6) from outer end of boom (4) and pin (7) from dipper stick (22).
2. Install dipper stick (22) to boom (4) and crowd cylinder (23) to dipper stick (22) with pins removed in step 1.

INSTALLATION OF CONTROL LINKS

1. Connect each of the six control levers to its respective valve spool using two links (24) and two clevis pins (25).
2. Install valve linkage cover (not shown) using five 5/16 x 1/4" self-tapping metal screws.

INSTALLATION OF HYDRAULIC HOSES AND TUBES

1. Install hose (8) from upper port of valve boom section to third tube from left (11) on boom. Attach hose (10) from lower port of valve boom section to second tube from left (9) on boom.
2. Connect hose (12) from upper port of valve bucket section to left outside tube (13) on boom. Install hose (14) from lower port of valve bucket section to right tube (15) on boom.
3. Attach hose (16) from upper port of valve crowd section to left port of crowd cylinder (17). Install hose (18) from lower port of valve crowd section to right port (19) of crowd cylinder. Pull hose slack to rear and secure with clamp (20).
4. Secure tubes (9), (11), (13), (15), (16), and (18) to boom with clamp (26).
5. Attach hoses (16) and (18) to boom with clamp (27).
6. Secure clamp (26) to boom with 5/16" x 2" N.C. bolt and lock washer.
7. Attach hose (21) from left port of bucket cylinder (29) to left tube on boom. Attach other hose to right tube on boom. Connect these hoses with dipper stick extended and make sure hoses will clear dipper stick hinge point when dipper stick is retracted. The correct clearance can be obtained by rotating the hoses to the proper position before tightening the hose fittings or if necessary the tubes may be re-formed by hand to facilitate clearance.

NOTE: For attachment of Davis D-100 Backhoe to power unit, refer to applicable installation sheet.

SERVICE

LUBRICATION CHART

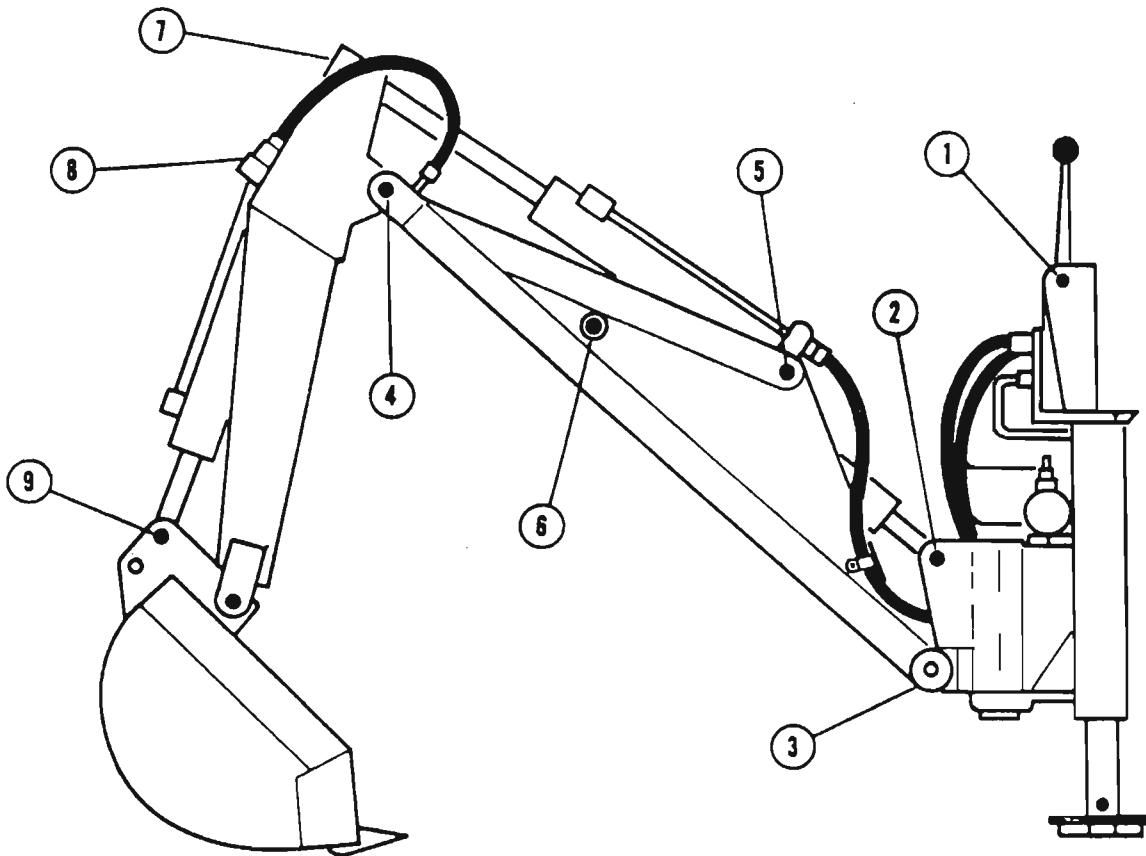

Figure 2

Use only recommended hi-grade lubrication grease.
Grease daily or more often if conditions warrant.

1. Valve Control Lever — 6 places
2. Rod end Bushings — Boom Cylinder
3. Lower Boom and king post bushings
4. Upper Boom and Dipper Stick Bushings
5. Head end Bushings — Crowd Cylinder
6. Head end Bushings — Boom Cylinder
7. Rod end Bushings — Crowd Cylinder
8. Head end Bushings — Bucket Cylinder
9. Rod end Bushings — Bucket Cylinder

If desired, under normal operating conditions, soft oil can be applied to bucket hinge pin bushings and swing cylinder gear teeth and guide to provide quieter operation. However, it is not recommended to apply oil to these parts if machine is to be operated in extremely dusty areas as the oil will attract dust particles causing excessive wear.

Check lower boom pivot bracket bolts and pin retaining bolts after the first few hours of operation and tighten if necessary.

RELIEF VALVES

The Davis D-100 Backhoe control valve has four separate relief valves incorporated in the valve body. These relief valves are of a pilot operated design and are non-adjustable. If replacement of any of these valves becomes necessary, consult the Parts Section of this manual.

MAIN PRESSURE RELIEF VALVE

The main pressure relief valve is located on top of the left port plate of the control valve. This valve protects the entire hydraulic system from overloading and is pre-set to open at 2000 P.S.I.

BOOM RELIEF VALVES

The boom section of the control valve has two built-in relief valves. One located in the top port and one in the bottom port of the boom section. These relief valves are pre-set to open at 3000 P.S.I. and have been incorporated to insure complete protection against overloading the boom cylinder. They also provide a cushioning effect on the boom during a sudden drop.

DIPPER STICK OR CROWD CYLINDER RELIEF VALVE

A 3000 P.S.I. relief valve is located in the top of the dipper stick or crowd section of the control valve. The function of this relief valve is to limit the load stresses on the dipper stick and the dipper stick or crowd cylinder.

SWING CYLINDER RELIEF VALVES

In addition to the four relief valves installed in the control valve body two relief valves have also been built into one end of the swing cylinder.

These valves are pre-set to open at 2000 P.S.I. and provide a cushioning action of the boom during the swing operation. This cushioning effect results in a much smoother operation and a minimum of stress on the boom and swing cylinder components.

ADJUSTMENT OF ORIFICE PLATES

If boom swing is faster than desired, speed can be adjusted by removing swing cylinder tubes at the control valve. Using a screw driver, remove fixed orifices from ports. Holes in orifices can be closed by laying orifice on solid object and partially closing holes with a blunt punch.

OPERATING INSTRUCTIONS

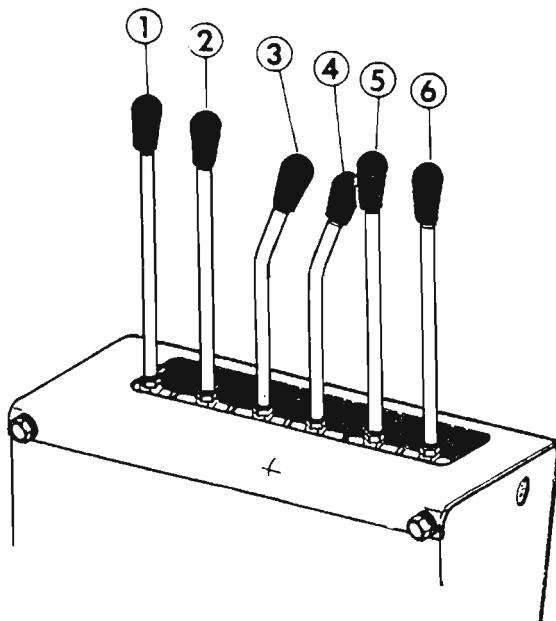

Figure 3

1. The boom is raised by pulling back on No. 1 lever on the operator's left and lowered by pushing forward on this same lever.
2. The backhoe swings left by pulling back on the No. 2 lever and swings right by pushing the lever forward.

3. The No. 3 lever operates the left stabilizer. The No. 4 lever operates the right stabilizer. Push forward on Nos. 3 and 4 levers to lower the stabilizer feet — pull back to raise them.
4. The No. 5 lever controls the dipper stick or crowd cylinder. Pull the lever back to bring the bucket toward the operator, push forward to push it away from the operator.
5. The No. 6 lever operates the bucket. Pull lever back to curl the bucket, push forward to dump.

FLUSH DIGGING

If additional clearance is required for flush digging, the over-all width of the D-100 can be reduced by removing the stabilizer feet and turning them around. To accomplish this, remove the pins from the under side of feet. Remove feet and replace them so that offset faces center of machine.

OPERATIONAL TIPS

To familiarize yourself with the operation of the Davis D-100 Backhoe it is recommended that the unit be operated at near idle speed until efficient, simultaneous operation of the controls is mastered. As you operate the machine you will notice that the simultaneous operation of the controls will contribute to smoother cylinder action producing a more efficient use of the hydraulic power.

Always operate the D-100 from the operator's seat. Due to the full 180° swing of the boom it is imperative to keep your feet **behind** the foot guards located above the stabilizer section of the Backhoe.

GENERAL INFORMATION

THIS CATALOG IS INTENDED TO PROVIDE PARTS ORDERING INFORMATION ONLY, AND SHOULD NOT BE USED AS A GUIDELINE FOR DISASSEMBLY OR REASSEMBLY OF THE MACHINE OR COMPONENTS.

Illustrations:

All parts are illustrated in "Exploded Views" which show the individual parts in their normal relationship to each other. Reference numbers are used on the illustrations. These numbers correspond to those used in the REFERENCE NUMBER column, and are followed by the part number, description, number required, and serial code when applicable.

The repair parts for the available engines are found in the applicable engine manual. Engine parts must be obtained from the engine dealer or distributor.

Indented Description:

Indented parts in the description list are a part of the preceding assembly or sub-assembly. The quantity shown in the "Number Required" column is the number of parts used on a machine except where parts are indented in descriptive list. In that case, the quantity shown is the number required for the preceding assembly or sub-assembly. An X or AR in the "Number Required" column indicates the quantity to be used is "as required."

Ref. No.	Part No.	No.	Used Req.
7	H554675	Boom End Asm -----	1
8	H508168	..Outer Roller Asm -----	2
9	H071779Roller -----	1
10	H747139Bearing -----	2
11	H080838	...Square Shaft -----	2

Serialized Parts:

Part variations within serial number coded assemblies are indicated by a letter in the USED ON column. When the USED ON column is blank, the parts listed apply to all machines covered by the figure. The serials that apply to each letter in the USED ON column are listed at the bottom of the text page for each figure.

Right-Hand and Left-Hand Sides:

Right-hand and left-hand sides (abbreviated to RH and LH) of the basic machine and front mounted equipment are determined by sitting or standing in the operator's seat or position and facing the direction of forward travel.

Right-hand and left-hand sides of rear mounted equipment are determined by sitting in the operator's seat and facing the equipment.

Abbreviations:

AR	As Required	NC	Unified National Coarse Thread
CPSS	Cup Point Set Screw	NF	Unified National Fine Thread
Fe. Sw.	Female Swivel Fitting	NPT	National Standard Taper Thread
FHCS	Flat Head Cap Screw	NPTF...	Dryseal American Standard Pipe Thread
HHCS	Hex Head Cap Screw	NSS	Not Serviced Separately
HT	Heat Treated	ORB	O-Ring Boss
JIC	Joint Industry Conference	RH	Right Hand
LH	Left Hand	RHCS	Round Head Cap Screw
M	Male Fitting	RFMS	Round Head Machine Screw
MP	Male Pipe Thread	SAE	Society of Automotive Engineers
M. Sw.	Male Swivel Fitting	SHSS	Socket Head Set Screw
NA	Not Available	STCS	Self Tapping Cap Screw
		THCS	Truss Head Cap Screw

Where dimensions are given for bolts, screws, pins, etc., the diameter is given first and length second.

It is the policy of the J. I. Case Co. Davis Division to improve its products whenever it is possible and practical to do so. We reserve the right to make changes or add improvements at anytime without incurring any obligation to make such changes on any machine sold previously.

REPAIR PARTS CATALOG

D-100 Backhoe

READ THESE INSTRUCTIONS BEFORE ORDERING PARTS

NOTICE: PARTS ARE INCLUDED IN THIS MANUAL AS A CONVENIENCE TO THE OWNER. ALL PARTS SHOULD BE ORDERED THROUGH A FRANCHISED DAVIS DEALER. ALWAYS GIVE SERIAL NUMBER OF MACHINE WHEN ORDERING PARTS.

The model, spec and serial number of your machine, shown on the name plate must be given when ordering parts.

The Serial Plate Is Attached To The Left Side Of The Control Valve Bracket.

FILL IN THE ABOVE INFORMATION ON THE PHOTO OF THE NAME PLATE SO THAT IT WILL BE AVAILABLE TO YOU WHEN ORDERING PARTS.

To insure prompt and accurate service, the following information must also be given:

1. State exactly, quantity of each part and part number.
2. State definitely how parts are to be shipped.

BOOM, BUCKET, CROWD CYLINDER

When Ordering Replacement Parts For The D-100 Or SD-100 Boom, Crowd Or Bucket Cylinders.
Use The Illustration Below For Proper Identification. All Cylinders Are Easily
Recognized By Examining The Rod End Of The Cylinder.

Cessna Cylinder - Bearing Lock Nut At "A"

Lantex Cylinder - Enlarged Barrel "B" - Set Screw "C"

Lantex Cylinder - Lock Wire "D" - "LANTEX" At "E"

Lantex Cylinder - Bearing Collar - "F" - "LANTEX" At "G"

FIGURE 8

BOOM, BUCKET, CROWD CYLINDER

When ordering replacement parts for the D-100 on SD-100 Boom Bucket on Crowd Cylinder, use the illustrations at bottom of preceding page for proper identification. All Cylinders are easily recognized by examining the rod end of the cylinder.

Cessna Cylinder - Bearing Lock Nut At "A"

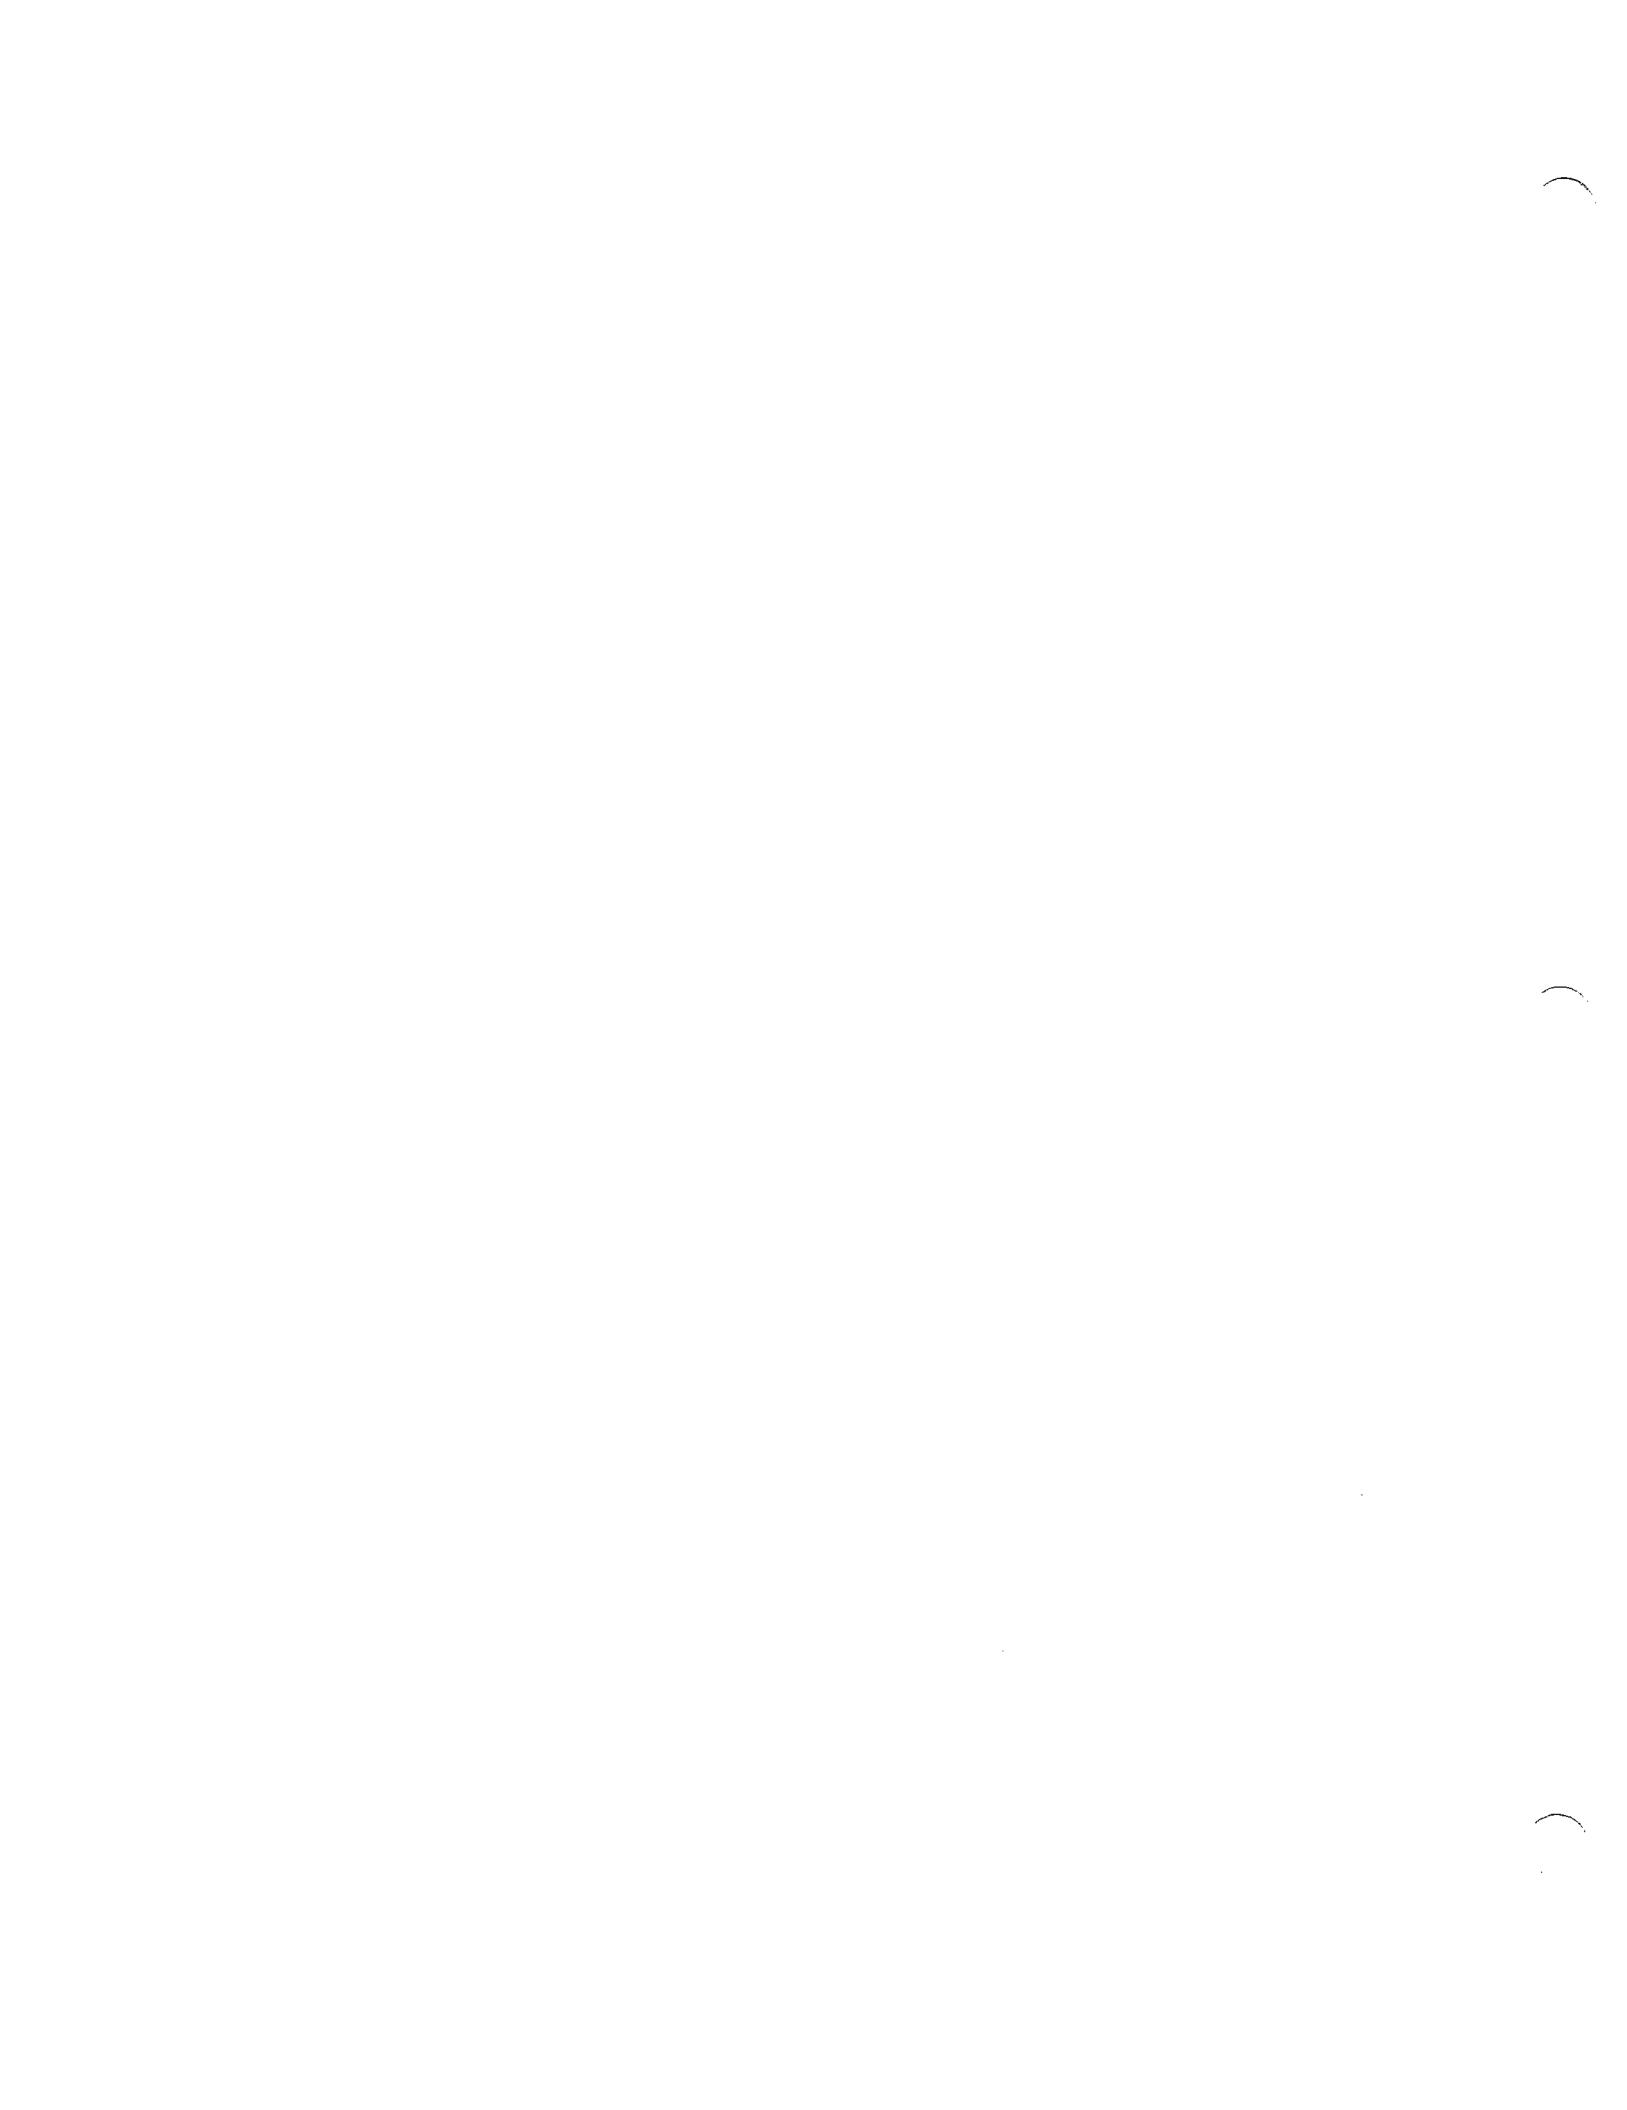

Case Cylinder - Enlarged Rod End "B" And Set Screw "C"

Lantex Cylinder - Lock Wire "O" - "Lantex At "E"

Lantex Cylinder - Bearing Collar - "F" - "Lantex At "G"

All Cylinders are completely interchangeable as complete assemblies.
